

The Modern Standard in Bank Infrastructure. Precision-Engineered by the Community Bankers Association of Illinois.

CBAI Web Hosting Services provides your institution with cutting-edge technology, enterprise-grade security, and a high-performance infrastructure built to withstand rigorous regulatory audits. Our platform consistently satisfies all banking quality standards and security compliance mandates, including the specialized deployment of secure .Bank top-level domains. We deliver a fully isolated, secure Virtual Private Server (VPS) environment managed by an elite team of engineers with extensive, hands-on experience in financial sector technology.

Every VPS architecture is engineered from the ground up to maximize usability, structural functionality, and network perimeter defense. Backed by deep expertise in FFIEC, FDIC, and GLBA compliance frameworks, we eliminate the operational blind spots unique to financial web properties. We partner directly with your team to customize a highly specialized deployment path that aligns with your bank's risk assessment blueprints.

Experience The Difference: Proactive Security & Performance Baseline

- **Continuous Vulnerability & Penetration Testing:** To ensure your institution remains continuously secure and audit-ready, our team executes proactive quarterly vulnerability scans and penetration assessments across all hosted bank servers and web directories.
- **Military-Grade Encryption Standard:** While traditional hosting companies rely on standard 128-bit security, we include enterprise-grade 256-bit SSL/TLS encryption certificates entirely free of charge to safeguard data transmission.
- **Hardened LAMP Stack Sovereignty:** Our purpose-built LAMP stack servers (Linux, Apache, MySQL, PHP) are custom-hardened to outperform generic Nginx configurations. This architecture delivers superior database efficiency, deeper core access controls, and tighter backend isolation.
- **Redundant Air-Gapped Snapshots:** Your critical banking assets are protected by a multi-layered disaster recovery protocol. We maintain completely independent rolling 7-day, monthly, and annual server-level snapshots. These are air-gapped from local website-level backups to guarantee instantaneous redeployment in the event of a catastrophic incident.
- **Unified Vendor Management:** We believe community banks deserve to simplify their compliance reporting and vendor management loops. By consolidating your secure web hosting, complimentary domain registration, Route 53 DNS management, and managed corporate email under a single trusted association umbrella, we eliminate security fragmentation.

The Infrastructure Gap: Bank-First VPS vs. Shared Marketing Portfolios

While traditional marketing firms manage hundreds of generic commercial websites, they often treat hosting as an opaque, bundled afterthought. Mixing financial systems with unrelated retail clients on shared networks inherently introduces structural vulnerabilities and compliance risks.

In stark contrast, **CBAI Web Hosting focuses 100% of our energy on core infrastructure.**

- **Lightning-Fast Speed:** Engineered with maximum data throughput to ensure your site remains lightning-fast and responsive during intense peak traffic windows.
- **Bank-First Security:** Built natively on enterprise-grade, SOC 2 Type 2 compliant AWS Secure Cloud infrastructure.
- **Unified Digital Infrastructure:** We consolidate your Hosting, CDN, DNS, and Email services under a single company umbrella. This eliminates multi-vendor finger-pointing and keeps your network layers perfectly synchronized.
- **Zero Cross-Contamination:** Your bank website is strictly isolated. We never mix secure banking infrastructure with volatile public retail sites.
- **Person-to-Person Support:** True one-on-one, dedicated human support backed by extensive knowledge of financial industry regulations. No automated loops or impersonal ticketing bottlenecks.

Infrastructure Sovereignty & Compliance Control

To satisfy strict regulatory examinations (such as GLBA and FFIEC), financial institutions require unabstracted, root-level environment access. Commercial managed platforms hide the server layer, causing major audit deficiencies:

1. **Granular Audit Logging:** Compliance mandates continuous, unedited system logs routed directly to your internal Security Information and Event Management (SIEM) tool. Our Webmin interface grants the root access required to query raw OS logs in real time.
2. **Custom Hardening & Patch Control:** We allow administrators to immediately patch local operating system libraries, disable unwanted network ports, or modify kernel parameters the moment a zero-day exploit drops, rather than waiting for an outside host's rigid update cycle.
3. **Encryption Key Control:** Enterprise bank compliance requires managing your own dedicated encryption keys at rest using external Hardware Security Modules (HSMs).

Transparent CBAI Member Tier Pricing

All Linux VPS plans feature isolated environments, static IP assignments, and security-focused LAMP architectures.

Managed Linux VPS Hosting Tiers

Feature	Tier 1 Web Hosting	Tier 2 Web Hosting	Tier 3 Web Hosting
CBAI Member Cost	\$1,295 / Year	\$1,495 / Year	\$1,695 / Year
Virtual Servers	1 Private Server	1 Private Server	1 Private Server
Dedicated IP	Static IP Address	Static IP Address	Static IP Address
RAM Allocation	1 GB RAM	2 GB RAM	4 GB RAM
Compute Core	2 vCPUs	2 vCPUs	2 vCPUs
SSD Storage	40 GB SSD	60 GB SSD	80 GB SSD
Bandwidth Cap	2 TB Bandwidth	3 TB Bandwidth	4 TB Bandwidth
Domains Included	1 Assigned Domain	1 Assigned Domain	1 Assigned Domain

- **Tier 4 Custom Web Hosting:** Setup upon request. Customized and priced precisely to your bank's specialized technical specifications.

Infrastructure-Integrated Add-Ons

CloudFront CDN & Geo-Distributed Threat Mitigation

Caches your bank's website across a secure global network, instantly dropping volumetric DDoS attacks at the network edge while delivering near-zero latency page loads to local customers. Secure this completely integrated service at an exclusive discounted rate for CBAI Member Banks.

- **CBAI Member Rate: Approx. \$85 / Year*** (*Association Discount Applied*)

AudioEye ADA Compliance & Accessibility

Utilizes continuous real-user monitoring technology that runs for every single visitor, deploying automated fixes in real time to ensure perpetual compliance.

- **CBAI Member Rate: \$495 / Year** (*30% Association Discount Applied*)
